

SPIDERS IN THE WORKPLACE

SECURITY CHECKLIST

1. DUCK TAPE YOUR WINDOWS!

Everyone knows that spiders are not very good at removing duck-tape from surfaces, mainly due to their feeble legs.

2. ENFORCE THE USE OF DRAFT EXCLUDERS ON ALL DOORS!

Its a common fact that spiders often travel from room to room under doors - simply using draft excluders will prevent this. (TIP: use a realistic snake excluder to add extra affect as the spider will also fear being eaten)

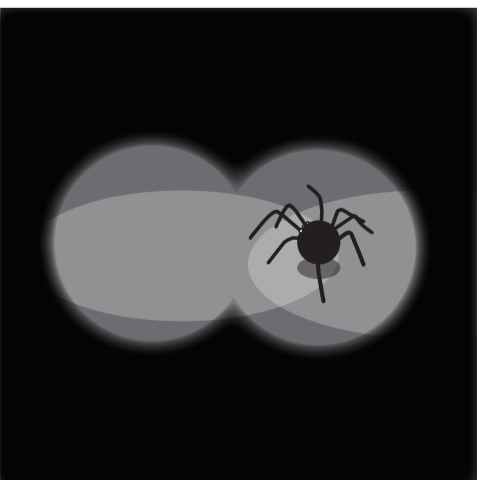

3. GET A CAT!

Well known fact... cats love to chase and eat spiders. By getting a studio cat you can ensure that if a wily spider manages to get in the cat will see to it!

4. DON'T LEAVE SPIDER FOOD LAYING AROUND!

We are not quite sure what house spiders eat, but we are confident that leaving food out will certainly attract them.

5. INTRODUCE SPIDER PATROLS!

To stay on top of arachnid security it might be necessary to introduce daily perimeter checks to ensure that all your defences are still in place.
